

Alex Radulescu

AI-First Builder & Operator

Oradea, Romania | alex.radulescu@pm.me | linkedin.com/in/separatio | github.com/separatio

Summary

Builder and operator with 10+ years in software quality. I treat quality as defect prevention, not test execution. I ship multi-tenant SaaS, multi-agent orchestrators, and family-facing AI tooling end to end, with Claude Code as my execution layer. High agency, full ownership, productive when the path is unclear.

Building

- An early-stage multi-tenant SaaS in a regulated European market (pre-launch).
- **Flowy**: project management for AI coding agents. Open-source CLI (Apache 2.0) plus closed-source SaaS server (GraphQL Yoga, Bun, Fly.io); deliberate split licensing for adoption and protection.
- A self-hosted multi-agent Claude orchestrator running on personal infrastructure, paired to Discord.
- A family-facing AI Chief of Staff bot covering calendar, finance, and household context.

Skills

AI / Agentic Workflows: Claude Code (primary execution layer), multi-agent orchestration, MCP, Discord-paired agents, agent permission scoping

Building: TypeScript, Bun, Next.js, React, GraphQL, Prisma, PostgreSQL (Neon), Fly.io, systemd, Docker

Quality / Prevention: Test-pyramid design, contract testing, visual testing, CI/CD, defect-prevention code review

Ops / Leverage: Process design, technical-initiative frameworks, mentorship, cross-team coordination

Experience

Senior QA Automation Engineer, SportyGroup – Remote July 2023 – Nov 2025

- Designed and ran a cross-team technical-initiatives framework that lets engineers ship infrastructure improvements through a transparent process.
- Led the Python 3.10 → 3.11 unblock across all QA frameworks; led AI-augmented test debugging rollout (Allure + video + Slack + LLM suggestions).
- Led EU hiring interview-process redesign; mentored engineers on responsible AI usage.

Senior QA Automation Engineer, Circle.so – Remote May 2023 – Mar 2024

- Built React Native test infra from zero (Webdriver.io + Mocha + Appium 2 + BrowserStack real devices) in TypeScript.
- Designed accessibility-id locator strategy that enabled iOS extension at near-zero future cost.

Senior QA Engineer / QA Lead, Toptal – Remote Feb 2017 – Feb 2023

- QA Lead for core-business frontend extraction: planned and executed Cucumber framework adaptation with 3 engineers; designed process and reporting from scratch.
- Cut Picasso local test execution 15 min → 3 min; built visual testing with Happo / Storybook / Cypress.
- Improved CLI tooling used by all frontend engineers across the company; one change, many beneficiaries.

Senior QA Engineer, Hopin – Remote Feb 2021 – May 2021

- Startup-pace operator: weekly release-candidate coordination, expanded TestCafe framework, coached backend engineers on test performance.

Gameloft · Ortneq · Rebelmouse · PitechPlus, Earlier QA roles – Romania Apr 2013 – Jan 2017

- Built and ran E2E frameworks (Selenium / Capybara / Codeception); load testing with jMeter; CI/CD on Jenkins.

Education

Self-directed, Computer Science (HS specialization) · freeCodeCamp · independent study 2008 – 2013
